Fady Atef Makram

Computer Science Student

Cairo, Egypt | +20 1289755934 | fadyatef.dev@gmail.com | linkedin.com/in/fady-atef-m

PROFESSIONAL SUMMARY

Second-year Computer Science student at Assiut University, focused on software development and competitive programming. Committed to building a strong technical foundation in C++, Data Structures, and Algorithms through academic study and hands-on training. Proficient in using AI tools to assist in coding, debugging, and accelerating development workflows. Motivated to apply my skills to build practical projects and solve real-world problems.

EDUCATION

Faculty of Computers and Information, Assiut University | *Bachelor of Computer Science*

Expected Graduation: 2029 | Cumulative GPA: 3.25/4.00

TRAINING & TECHNICAL EXPERIENCE

ICPC Training | Trainee

- Engaged in competitive programming training to develop algorithmic problem-solving skills and logical thinking.
- Practicing problem-solving on Codeforces to improve coding efficiency and familiarity with data structures and algorithms.

NTI Scholarship (National Telecommunication Institute) | Python Development Track

- Selected for a professional development program focused on Python software development.
- Gaining hands-on experience in software development workflows and industry-standard coding practices.

C++ & Data Structures Intensive Program | Programming Advices (Instructor: Dr. Mohammed Abu-Hadhoud)

- Completed a comprehensive 13-course curriculum focused on mastering C++ fundamentals, Object-Oriented Programming (OOP), and advanced Data Structures.
- Built a robust understanding of memory management, pointers, recursion, and algorithm complexity (Big O notation) with verifiable certifications.

TECHNICAL SKILLS

Programming Languages: C++, Python.
Core Computer Science: Data Structures, Algorithms, Object-Oriented Programming (OOP).
AI Productivity: Proficient in leveraging AI tools to assist in coding, troubleshooting, and accelerating development workflows.
Problem Solving: Competitive Programming, Logic Optimization, Debugging.
